

Conceptual Approach to development

- Problem 2: PySpark Analytics Pipeline
 - Break down the problem into distinct isolated finite steps (Thinking in a functional programming way)
 - Utilize Test-driven development (TDD) to ensure function correctness and reduce bugs
 - Modularize the code and utilize separation of concerns (without over abstracting the code)
- Problem 3: ML Forecasting
 - Similar to problem 2 in terms of structure and problem breakdown process
 - Think more in terms of data cleaning/prep, ML Accuracy, and validations.
